## PROFESSIONAL EXPERIENCE

---

**ANR Software Pvt. Ltd. - Noida, India**  
**QA Engineer**

**Oct 2022 – Present**

*Product-based software company developing enterprise business systems for major U.S. food chain clients*

- QA Engineer with 3+ years of experience in manual testing, including functional, regression, smoke, sanity, UAT, integration, and API testing. Skilled in defect lifecycle management (JIRA, Mantis, Trello), release coordination, and cross-platform/cross-browser testing for web and mobile applications. SQL-certified with hands-on database testing experience and basic working knowledge of Selenium WebDriver for automation testing.
- Performed end-to-end manual testing across 3+ enterprise applications, executing functional, regression, smoke, sanity, UAT, integration, and API testing to ensure production-ready releases.
- Developed and maintained test plans, test strategies, Requirements Traceability Matrices (RTMs), defect reports, and test summary reports in alignment with STLC and SDLC standards, ensuring complete requirement traceability across all test cycles.
- Managed the complete defect lifecycle by tracking and validating 300+ defects using JIRA, Mantis, Trello, and TestLink, ensuring timely resolution before release.

## CERTIFICATIONS

---

SQL (Basic) - HackerRank | Issued June 2026 | Credential ID: E3F36A2C5D60

## EDUCATION

---

**Bachelor of Engineering (B.E.), Electrical & Electronics Engineering**  
*University Institute of Technology, RGPV*

## TECHNICAL SKILLS

---

**Testing Types:** Functional, Regression, Smoke, Sanity, UAT, Integration Testing, API Testing

**Database:** SQL (HackerRank Certified)

**Bug Tracking:** JIRA, Mantis, Trello, TestLink

**API Testing Tools:** Postman

**Methodologies:** Agile / Scrum

**Programming Language:** Java (Basic)

**Automation Tools:** Selenium WebDriver (Basic)

**CI/CD Tool:** Jenkins (Basic)

**Automation & Workflow Tools:** n8n

## PROJECTS

---

### AI-Driven Workflow Automation

*Tech stack: n8n, OpenAI, HTTP, APIs, JSON, Google Sheets*

- Built end-to-end automation workflows in n8n to streamline glossary and blog publishing processes, including creating new content and updating existing content on the website, significantly reducing manual effort.
- Integrated AI models into automation workflows to automatically identify grammatical errors and content inconsistencies before publication, minimizing manual review time and improving content quality.
- Developed robust real-time error-handling workflows to ensure reliable execution and maintain high data accuracy across automated processes.

## **Data Archive**

***Tech stack: SQL, Database Schema Management, Data Validation, JIRA***

- Designed and managed an end-to-end data archival project to migrate records older than one year from the production database to the archive schema.
- Developed connection and schema validation logic to verify database structures and ensure required flags (is\_arch\_ready and is\_archived) were correctly set before initiating the migration process.
- Implemented automated cleanup logic to remove production detail records only after successful archival, ensuring data integrity and preventing data loss.

## **Archived Data Export**

***Tech stack: SQL, API/Backend Handler, JIRA***

- Contributed to the design and validation of an archived data export feature, enabling users to retrieve historical records via a UI-driven request built on filters including owner, store list, date range, and module.
- Validated the end-to-end request flow from UI submission through backend handler processing ensuring accurate query execution and reliable data export
- Tested real-time status tracking and downloadable export output on the UI, verifying data accuracy and completeness against source records across multiple test scenarios.

## **Altametrics Enterprise Mobile Suite**

***Tech stack: iOS, Android, JIRA, Mobile Functional Testing, UI/UX Validation***

- Performed end-to-end functional testing for the Schedule, Clock, Inventory, and DAR mobile applications used by major U.S. food chain operators.
- Validated key workforce management features, including shift scheduling, employee shift swaps, time tracking, and real-time staffing updates, to ensure accurate business operations.
- Verified consistent application behavior across iOS and Android devices by conducting cross-platform and cross-version compatibility testing.

## **Website Testing & SEO Optimization**

***Tech stack: Manual Testing, Cross-Browser Testing, Responsive Testing, SEO Analysis***

- Performed end-to-end testing for Plum POS, Plum Payroll, Plum Accounting, Tip-Pooling, and the Restaurant Association websites, covering functional, cross-browser (Chrome, Firefox, Edge, and Safari), and responsive testing across desktop, tablet, and mobile devices.
- Identified SEO issues and broken links, and worked closely with the SEO team to improve website crawlability, accessibility, and overall site performance.
- Logged, tracked, and verified defects using JIRA while collaborating with development and UI/UX teams to resolve layout, design consistency, and responsiveness issues, ensuring a high-quality user experience across all platforms.

## **Transfer In/Out Dashboard**

***Tech stack: SQL, Dashboard/UI Validation, Data Reconciliation, JIRA***

- Validated a new Transfer In/Out dashboard featuring summary tiles for transfer counts, total transfer amounts, and posted vs. pending transfer status, along with graphical and tabular views for both transfer directions.
- Tested end-to-end transfer workflows for ingredients, prep items and waste between stores, verifying accurate posting of transfer transactions across source and destination locations.
- Cross-validated transfer records at source and destination stores post-posting to ensure inventory accuracy and consistent dashboard metrics.
